PROJECTS

Event Hub (Jan 2023 - Feb 2023)
<https://event-hub-frontend.vercel.app/>

(ReactJs, NodeJs, MongoDB, ExpressJs)
A platform where all students can see the upcoming events and can register for the upcoming events.

- All the clubs can post their upcoming events on the platform by Signing In.
- The clubs can update their events details after posting it using their dashboard.
- The students can see the events highlight in the form of card and if they are interested they can see more details by clicking on the more details button and can register for event by clicking on register button.

Code to Image (Mar 2023 - Mar 2023)
<https://codetoimg.vercel.app/>

(ReactJs, Styled-Components)
A product using which user can create beautiful snippets of their code.
The product Code to Image was featured on Product Hunt and got #48 rank of the day (<https://www.producthunt.com/posts/code-to-image>)

- User can create beautiful code snippets with customizable fonts, theme UI, background, can change width and padding of the snippet, can change the programming language type and can change the file name.
- Also user can select the dark mode and light mode for the snippet.
- User can download the snippet in different formats e.g PNG, JPEG, and SVG

ZipURL (May 2023 - June 2023)
<https://zipurl.vercel.app/>

(Javascript, Next Js)
ZipURL helps users to make their urls short and user can also name their short url which makes url more understandable.

- User can make short url with few clicks and can name it to make it more readable.
- Also user can manage all his short links made using ZipURL.
- Also user can get analytics which shows that how many people have clicked the short url.
- User can also download the QR code of short link and if user want to delete his short url than that is possible too.

Colour Codes (June 2023 - June 2023)
<https://colourcodes.vercel.app/>

(Next Js, Typescript, Tailwind)
Colour Codes helps developers to get all types of colour codes such as Rgba, Rgb Hex, Hsla, Hsl and the nearest tailwind colour.

- Developers can type any form of colour such as Rgba, Rgb, Hex, Hsla, Hsl and can get the all types of colour codes.
- Also Developer can get all types of colour codes using colour palette.
- Developer can download the npm package **colour-codes** using which devs can convert colour codes easily in their projects.

Hostel Room Allocation System (Feb 2023 - Feb 2023)
<https://devfolio.co/projects/hostel-room-allocation-system-8a89>

(JavaScript, NodeJs, MongoDB, ReactJs)
A platform where registered students can avail there room with ease with there friends.

- Eligible students have option to book room with random roommate or with their friend.
- Also student can see the current status of all rooms like we see the movie ticket status and student can identifies that which rooms are partially booked,fully booked and partially booked rooms by seeing the room status.
- Students can select the specific room by clicking on room status just like we book the specific seats for movies online.
- If student does not select any room then we allocate him/her the room which is partially booked or the queue format depending upon the situation
